**Morten Tolstrup : Indoor Radio Planning: A Practical Guide for 2G, 3G and 4G** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Indoor Radio Planning: A Practical Guide for 2G, 3G and 4G:

2 of 2 people found the following review helpful. Absolutely FANTASTIC!! Not for scientists By stone Absolutely FANTASTIC!! Not for scientists. It's a great book and breaks down everything on DAS and indoor coverage systems. It provides a clear understanding of Indoor planning, Link budget calculation, traffic calculation and noise analysis. The new edition particularly treats 4G, PIM and MIMO systems. This book is a must have for all engineers and

practitioners of DAS and Indoor RF systems, it was written by a practitioner with vast knowledge and experience in DAS and indoor RF systems. I would definitely recommend this book for all personnel working in the field of DAS and indoor systems. You would not regret getting a copy. 1 of 4 people found the following review helpful. Three Stars By Cyril Dinopol I like the book. But has this even been proofread? 0 of 0 people found the following review helpful. The RF engineer's bible By Customer Whether you do work professionally or are even a Ham this is a must have book. Morten lays details out from Laymans to engineering terms to break down RF in stages. Easy to read and understand. Chapter 7 is very important. Memorize it. Understand it, absorb everything about Chapter 7 as it is the most important part of any form of communication. Understanding the book will help you become a stronger RF Engineer.

Why is high performance indoor wireless service needed, and how is it best implemented? As the challenge of providing better service and higher data speeds and quality for mobile applications intensifies, ensuring adequate in-building and tunnel coverage and capacity is increasingly important. A unique, single-source reference on the theoretical and practical knowledge behind indoor and tunnel radio planning, this book provides a detailed overview of mobile networks systems, coverage and capacity solutions with 2G, 3G and 4G cellular system technologies as a backdrop.
