Tim New : Insects and Pest Management in Australian Agriculture before purchasing it in order to gage whether or not it would be worth my time, and all praised Insects and Pest Management in Australian Agriculture:

This is the first introductory text to deal with the problems caused by insects as pests in Australian agriculture and related primary industry, and the use of insects to combat pests such as insects and weeds. It emphasizes Australian examples throughout and is designed specifically to reflect traditional and recent developments associated with pest management in Australia and other countries. The development of integrated pest management is a central theme, but chapters are provided on all major facets of pest control, with accounts of their development, importance and contributions to current management strategy and practice. Each chapter concludes with suggestions for further reading and the most recent references are cited to give students, applied entomologists, researchers and agriculturists

the most current and comprehensive information available.
