Shahan A. Hovanesian : Introduction to Sensor Systems (Artech House Communication and Electronic Defense Library) before purchasing it in order to gage whether or not it would be worth my time, and all praised Introduction to Sensor Systems (Artech House Communication and Electronic Defense Library):

Wonderful primer on sensor systems.By The Pie Face PrinceThis book has about 300 pages organized into 8 chapters. The main topics covered are microwave and millimeter radars, electro-optical thermal imagers, and laser radar systems. Also described are synthetic array and imaging radars. The book is what it says, an introduction. It is perfect for engineers and scientists new to sensor systems, or as a reference for anyone practicing in the field. There are lots of useful equations, tables, and illustrations. The writing is unusually crisp and clean for a text on these subjects. If you are interested in these topics then this book should be in your library, but get a used edition as a new one is too expensive.
