D J Spencer : Knitting Technology, Third Edition: A Comprehensive Handbook and Practical Guide (Woodhead Publishing Series in Textiles) before purchasing it in order to gage whether or not it would be worth my time, and all praised Knitting Technology, Third Edition: A Comprehensive Handbook and Practical Guide (Woodhead Publishing Series in Textiles):

1 of 3 people found the following review helpful. Not meant for the handknitterBy RaptorhavenThe book is all about

machine knitting, and not the little knitting machines you have at home. It's about the enormous commercial knitting machines. So while you can glean some useful information, it is not at all what I expected and basically useless to me. 4 of 12 people found the following review helpful. Highly Recommend! By Wild Boar Excellent treatment of the topic with appropriate detail for the novice as well as the expert. A must have reference. 6 of 16 people found the following review helpful. Not what I was looking for By Brenda Robertson More of a textbook than a machine knitting resource. I just purchased a knitting machine and was looking for a good reference book. I thought this might be a good choice but that's not what this book was meant to be. The only reason for the low rating is that it didn't fill the need. Not the book's fault but I wouldn't want other new hobby machine knitters to make the same mistake.

The third edition of *Knitting Technology*, widely recognised as the definitive text on the subject, has been thoroughly revised and updated to include all the latest developments. Beginning with the fundamental principles and moving on to more advanced aspects, it combines in a single comprehensive volume the basics of warp and weft knitting, fabric structures and products, the different types of machines, principles of production and terminology to provide an invaluable reference for textiles students, textile engineers and technicians involved in knitted garment design and manufacture. Fundamental rules and principles are emphasised throughout. Aspects covered include flat, circular, full fashioned, hosiery, raschel, tricot and crochet production. Development of the various types of knitting machines, their actions and mechanisms as well as the construction, properties and end uses of the products which they manufacture are also included. The book is indexed and referenced in detail and includes numerous labelled diagrams and photographs. Terminology is defined either according to The Textile Institute's terms and definitions or current usage in the industry and is supplemented where necessary by American or continental terminology. Although SI units and the tex yarn count system are explained and used in the text, other systems have also been employed wherever it has been considered that their usage is still important. A number of worked calculations are included to clarify the examples given. *Knitting technology* is the ideal textbook for a range of textile courses from technician to degree level and The Textile Institute's examinations as well as being an essential companion to all those involved in the knitting industry. An essential reference for all textiles student textile engineers and technicians involved in knitted garment design and manufacture

This authoritative book is essential for both students of knitting technology and practitioners in the knitting and textile industry. *Textile Horizons* widely recognised as the definitive text on the subject completely revised and updated. *Knitting International* About the Author David J. Spencer, C Text, FTI, ACFI, recently retired as a senior lecturer in Textile and Knitting Technology at De Montfort University Leicester. He has been an examiner and moderator in the Manufacture of Hosiery and Knitted Goods for the City and Guilds of London Institute. He has written numerous technical articles and is technical editor of the journal *Knitting International* and contributing editor of *ATA Journal* and *China Textile Journal*. He is Chairman of the Textile Institute Knitting Terms and Definitions Committee. He obtained his initial industrial experience with Corah of Leicester who were then world leaders in the application of knitting technology.
